

APPLICATION GUIDE FOR CLINICIAN INNOVATOR DEVELOPMENT AWARD (CIDA)

A) Aim

- This pilot programme aims to support clinicians with potential medical innovation ideas. This award provides a seed fund and salary support, so that the clinician innovators can generate pilot data and bring their ideas to the next level.
- The award is non-renewable as the award recipients are expected to apply through subsequent funding (e.g., NHIC I2D) after this award.

B) Eligibility Criteria

- Applicant should hold a clinical qualification (e.g. MBBS, MD, BDS or equivalent), with specialty training beyond medical or dental school (including specialists, family physicians and public health practitioners). The maximum number of years after exiting from specialist training should not exceed 15 years.
- Applicant must be registered with the SMC/SDC and hold a primary appointment of at least 0.6 FTE in a local public health institution.
- Applicant must be a Singapore citizen or Permanent Resident at the point of application.
- All research must be conducted in Singapore at a public research institute, hospital/centre or medical school.
- Applicant must not currently be supported under the Transition Award (TA), Clinician Scientist Award (CSA) or Singapore Translational Research (STaR) Investigator Award. Applicants for the CIDA also cannot make concurrent applications for the TA, CSA or STaR Awards. Applicants are allowed to hold up to 0.3 FTE salary support under the Clinician Scientist / Clinician Investigator Salary Support Programme (CS/CISSP), if awarded the CIDA.

C) Key Features

- Funding quantum up to \$100k grant support and 30% salary support up to 2 years. Applicant will need to indicate the grant and salary support required at the point of application and with institution support. Subsequent changes may not be entertained.
- The funding of the salary is capped by clinical grade for awardees who devote 30% time to research. For those requiring less than 30% time for research, the salary support will be adjusted proportionately. Table 1 indicates NMRC's annual salary support based on the clinical grade (including fringe benefits and allowances)*.

Table 1: NMRC's Annual Salary Cap by Clinician's Clinical Grade

Clinician's Clinical Grade	30% Annual salary cap*
Senior Consultant	S\$90,000 (NMRC: \$60,000; HI co-funding: \$30,000)
Consultant	S\$60,000 (NMRC: \$40,000; HI co-funding: \$20,000)
Associate Consultant	S\$45,000 (NMRC: \$30,000; HI co-funding: \$15,000)
Registrar	S\$36,000 (NMRC: \$24,000; HI co-funding: \$12,000)

* NMRC supports up to 20% of the salary; Institution is required to co-fund the remaining 10% of the salary.

- The Institution is also required to top up the difference if the salary exceeds NMRC's Annual Salary Cap. Should there be a change in the awardee's clinical grade, Host Institution should write timely to NMRC for approval for changes to the salary support. The request must be submitted along with an official HR letter indicating the awardee's new position and the effective date. After NMRC's approval, the revision of the award cap will apply from the month when the request was received or the effective month of new clinical grade, whichever is appropriate. Institutions will also need to provide annual report to NMRC on awardees' time spent on research (e.g., using time sheet).
- Optional nomination of mentor by the applicant is allowed at the point of application. The mentor is to provide the applicant with guidance in the research and should be an accomplished researcher in the proposed research field and have experience in mentoring.

D) Review Procedure

- The applications will be evaluated through a one-stage review process by a local selection panel. The review process will take about 5-6 months after the application closes. Shortlisted applicants may be invited for an interview.

E) Reporting Requirements

- The awardee will have to provide an annual report to NMRC which sets out what has been achieved and the progress made towards the contributions which had been agreed to at the point of recruitment.
- The awardee is required to submit a final report to NMRC within 3 months from the project completion date.

F) Submission and Deadline Details

- It is **mandatory** for all applications to be submitted *online via IGMS* by **31 May 2019, 5pm** (Singapore Time). Please ensure that all online submissions are endorsed by the corresponding the Institution's Head of Department and Institute's Director/ CEO / Dean of Medical School by the closing date.
- Late submissions or submissions from individual applicants without endorsement from the Host Institution will not be entertained.
- For further information on the Clinician Innovator Development Award, please contact the secretariat at Sharon_Sim@moh.gov.sg

General Instructions:

Please read the following carefully before completing this form.

- Please prepare your application using the templates available on the IGMS online submission system and upload these documents to the relevant sections in IGMS:
 - (i) Research Proposal
 - (ii) CVs (PI, Co-I/Collab, Mentor)
 - (iii) Research Team Signatures, Other Supporting Details and Supporting Documents
- Follow the instructions closely in every section and complete all sections in the application. Indicate “**NA**” where a particular section is not applicable.
- Use **Arial font size 10** for all text. Softcopy to be submitted as **1 file** including all the pictures, tables, charts and various attachments in Word DOC or PDF format.
- Adhere to the number of characters/space provided in each field and the number of pages where specified.
- Include **CVs** of the mentor(s), co-investigators and collaborator(s) with the email addresses and contact information clearly stated. Please specify and describe clearly the roles of collaborators in the application form.
- Append one-page statement of support per mentor nominated.
- Append research proposal of no more than 12-page (page limit excludes the translation pathway and reference section)
- Refer to **Appendix 1** for details on Health Research Classification System (HRCS) to complete “Health Category” and “Research Activity Codes” in the application form.
- Refer to **Appendix 2** for descriptions on Areas of Research which is related to the “Area(s) of Research” section in the application form.
- Refer and adhere to the NMRC guidelines available for download [here](#).
- The Applicant and the stated Department and Institution shall be the points of contact for NMRC. Applicants with multiple appointments at different institutions are to select only **one** hosting institution for the application.
- If you have submitted to this programme before, your application is considered a “resubmission” if the last submission had not been awarded. If your application is a resubmission, please provide your Office of Research the application ID(s) of your past submission(s).

Appendix I: HEALTH RESEARCH CLASSIFICATION SYSTEM

The Health Research Classification System is a bespoke system for classifying the full spectrum of biomedical and health research - from basic to applied - across all areas of health and disease.

It was developed by the UK Clinical Research Collaboration Partners. It is supported by an online reference source and manual - <http://www.hrcsonline.net/>".

Health Categories

Category	Includes
Blood	Haematological diseases, anaemia, clotting and normal development and function of platelets and erythrocytes
Cancer	All types of cancers (includes leukaemia)
Cardiovascular	Coronary heart disease, diseases of the vasculature and circulation including the lymphatic system, and normal development and function of the cardiovascular system
Congenital Disorders	Physical abnormalities and syndromes that are not associated with a single type of disease or condition including Down's syndrome and cystic fibrosis
Ear	Deafness and normal ear development and function
Eye	Diseases of the eye and normal eye development and function
Infection	Diseases caused by pathogens, acquired immune deficiency syndrome, sexually transmitted infections and studies of infection and infectious agents
Inflammatory and Immune System	Rheumatoid arthritis, connective tissue diseases, autoimmune diseases, allergies and normal development and function of the immune system
Injuries and Accidents	Fractures, poisoning and burns
Mental Health	Depression, schizophrenia, psychosis and personality disorders, addiction, suicide, anxiety, eating disorders, learning disabilities, autistic spectrum disorders and studies of normal psychology, cognitive function and behavior
Metabolic and Endocrine	Diabetes, thyroid disease, metabolic disorders and normal metabolism and endocrine development and function
Musculoskeletal	Osteoporosis, osteoarthritis, muscular and skeletal disorders and normal musculoskeletal and cartilage development and function
Neurological	Dementias, transmissible spongiform encephalopathies, Parkinson's disease, neurodegenerative diseases, Alzheimer's disease, epilepsy, multiple sclerosis and studies of the normal brain and nervous system
Oral and Gastrointestinal	Inflammatory bowel disease, Crohn's disease, diseases of the mouth, teeth, oesophagus, digestive system including liver and colon, and normal oral and gastrointestinal development and function
Renal and Urogenital	Kidney disease, pelvic inflammatory disease, renal and genital disorders, and normal development and function of male and female renal and urogenital system
Reproductive Health and Childbirth	Fertility, contraception, abortion, <i>in vitro</i> fertilisation, pregnancy, mammary gland development, menstruation and menopause, breast feeding, antenatal care, childbirth and complications of newborns
Respiratory	Asthma, chronic obstructive pulmonary disease, respiratory diseases and normal development and function of the respiratory system
Skin	Dermatological conditions and normal skin development and function
Stroke	Ischaemic and haemorrhagic
Generic Health Relevance	Research applicable to all diseases and conditions or to general health and wellbeing of individuals. Public health research, epidemiology and health services research that is not focused on specific conditions. Underpinning biological, psychosocial, economic or methodological studies that are not specific to individual diseases or conditions
Other	Conditions of unknown or disputed aetiology (such as chronic fatigue syndrome, myalgic encephalomyelitis), or research that is not of generic health relevance and not applicable to specific health categories listed above

Overview of the Research Activity Codes

1 Underpinning Research

- 1.1 Normal biological development and functioning
- 1.2 Psychological and socioeconomic process
- 1.3 Chemical and physical sciences
- 1.4 Methodologies and measurements
- 1.5 Resources and infrastructure (underpinning)

2 Aetiology

- 2.1 Biological and endogenous factors
- 2.2 Factors relating to physical environmental
- 2.3 Psychological, social and economic factors
- 2.4 Surveillance and distribution
- 2.5 Research design and methodologies
- 2.6 Resources and infrastructure

3 Prevention of Disease and Conditions, and Promotion of Well-Being

- 3.1 Primary prevention interventions to modify behaviours or promote well-being
- 3.2 Interventions to alter physical and biological environmental risks
- 3.3 Nutrition and chemoprevention
- 3.4 Vaccines
- 3.5 Resources and infrastructure (prevention)

4 Detection, Screening and Diagnosis

- 4.1 Discovery and preclinical testing of markers and technologies
- 4.2 Evaluation of markers and technologies
- 4.3 Influences and impact
- 4.4 Population screening
- 4.5 Resources and infrastructure (detection)

5 Development of Treatments and Therapeutic Interventions

- 5.1 Pharmaceuticals
- 5.2 Cellular and gene therapies
- 5.3 Medical devices
- 5.4 Surgery
- 5.5 Radiotherapy
- 5.6 Psychological and behavioural
- 5.7 Physical
- 5.8 Complementary
- 5.9 Resources and infrastructure (development of treatments)

6 Evaluation of Treatments and Therapeutic Interventions

- 6.1 Pharmaceuticals
- 6.2 Cellular and gene therapies
- 6.3 Medical services
- 6.4 Surgery
- 6.5 Radiotherapy
- 6.6 Psychological and behavioural
- 6.7 Physical
- 6.8 Complementary
- 6.9 Resources and infrastructure (evaluation of treatments)

7 Management of Diseases and Condition

- 7.1 Individual care needs
- 7.2 End of life care
- 7.3 Management and decision making
- 7.4 Resources and infrastructure (disease management)

8 Health and Social Care Services Research

- 8.1 Organisation and delivery of services
- 8.2 Health and welfare economics
- 8.3 Policy, ethics and research governance
- 8.4 Research design and methodologies
- 8.5 Resources and infrastructure (health services)

Research Activity Codes

1. Underpinning Research	Research that underpins investigations into the cause, development, direction, treatment and management of diseases, conditions and ill health
1.1 Normal biological development and functioning	<p>Studies of normal biology including</p> <ul style="list-style-type: none"> ✚ genes and gene products ✚ molecular, cellular and physiological structures and function ✚ biological pathways and processes including normal immune function ✚ developmental studies and normal ageing ✚ bioinformatics and structural studies ✚ development and characterisation of model systems
1.2 Psychological and socioeconomic process	<p>Studies that do not address health directly but cover issues that may have a bearing on health and well-being including</p> <ul style="list-style-type: none"> ✚ perception, cognition and learning processes ✚ social and cultural beliefs ✚ individual or group characteristics and behaviours ✚ politics, economies and urban development ✚ development and characterisation of model systems
1.3 Chemical and physical sciences	<p>Research in chemical and physical sciences that may lead to the future development of diagnostic tools or medical treatments including</p> <ul style="list-style-type: none"> ✚ bioengineering and biophysics ✚ chemical structures, interactions and properties ✚ molecular modelling ✚ material science
1.4 Methodologies and measurement	<p>Development of novel underpinning research measures and analytical methodologies including</p> <ul style="list-style-type: none"> ✚ development of statistical methods and algorithms for genomic analysis ✚ development of mapping methodologies and novel data comparison methods ✚ development of biological, psychological and socioeconomic research measures
1.5 Resources and infrastructure (underpinning)	<ul style="list-style-type: none"> ✚ development and/or distribution of resources for use by the research community including equipment, cell lines, DNA banks, and genomic and proteomic sequence resources ✚ infrastructure to support research networks, consortia and centres

Research Activity Codes

2 Aetiology	Identification of determinants that are involved in the cause, risk or development of disease, conditions and ill health
2.1 Biological and endogenous factors	<p>Identification and characterisation of endogenous factors known or suspected to be involved in the cause, risk or development of disease, conditions or ill health including</p> <ul style="list-style-type: none"> ✚ genes and gene products, molecular, cellular and physiological structures and functions ✚ biological factors linked to ethnicity, age, gender, pregnancy and body weight ✚ endogenous biological factors or pathways involved in responses to infection or damage by external factors ✚ metastases, degenerative processes, regeneration and repair ✚ complications, reoccurrence and secondary conditions ✚ bioinformatics and structural studies ✚ development and characterisation of models
2.2 Factors relating to physical environment	<p>Environmental or external factors associated with the cause, risk or development of disease, conditions or ill health including</p> <ul style="list-style-type: none"> ✚ physical agents, occupational hazards, environmental surroundings, radiation and pollution ✚ chemicals and nutrients ✚ infection by pathogens and studies of infectious agents
2.3 Psychological, social and economic factors	<p>Research into psychological conditions, or research into the cause, risk or development of disease, conditions or ill health associated with social, psychological and economic factors including</p> <ul style="list-style-type: none"> ✚ individual or group behaviours and lifestyle ✚ cultural or religious beliefs or practices ✚ ethnicity, age and gender differences ✚ socioeconomic factors
2.4 Surveillance and distribution	<p>Observational studies, surveys, registries. and studies that track incidence, prevalence, morbidity, co-morbidity and mortality including ongoing monitoring of large scale cohorts</p>
2.5 Research design and methodologies (aetiology)	<p>Development of aetiological and epidemiological research designs, measures and methodologies including</p> <ul style="list-style-type: none"> ✚ methodological innovation and modelling complex epidemiological data ✚ development and evaluation of novel research designs ✚ development of epidemiological research measurements including outcome measures ✚ development of analytical and statistical methods to understand disease cause, susceptibility and risk including genetic linkage and association studies
2.6 Resources and infrastructure (aetiology)	<ul style="list-style-type: none"> ✚ development and/or distribution of resources for general use by the research community including equipment, cell lines, tissue and DNA banks, and genomic and proteomic sequence resources ✚ infrastructure to support research networks, consortia and centres

Research Activity Codes

3 Prevention of Disease and Conditions, and Promotion of Well-Being	Research aimed at the primary prevention of disease, conditions or ill health, or promotion of well-being
3.1 Primary prevention interventions to modify behaviours or promote well-being	<p>Development, implementation and evaluation of interventions to modify personal or group behaviours and lifestyles affecting health and well-being including</p> <ul style="list-style-type: none"> ✚ risk behaviours associated with diet, tobacco use, physical activity, alcohol consumption, sexual health and substance misuse ✚ age, gender, cultural or religious practices ✚ public health policy, health communication and educational interventions ✚ behavioural, psychological, social and physical interventions
3.2 Interventions to alter physical and biological environmental risks	<p>Development, implementation and evaluation of interventions surrounding physical, biological and environmental risk factors including</p> <ul style="list-style-type: none"> ✚ radiation, second-hand smoke, physical and chemical agents, ✚ occupational hazards and environmental surroundings ✚ contraceptive devices ✚ infectious agents ✚ policy, educational and physical interventions
3.3 Nutrition and chemoprevention	<p>Research on chemopreventative agents and health protective effects of nutrients including</p> <ul style="list-style-type: none"> ✚ development, characterisation and mechanism of action ✚ chemical contraceptives ✚ testing and evaluation in model systems and clinical, applied and community settings ✚ evaluation of evidence to inform policy
3.4 Vaccines	<p>Research on vaccines for prevention of disease including</p> <ul style="list-style-type: none"> ✚ discovery, development and testing of vaccines and vaccination in model systems ✚ mechanism of action ✚ development, implementation and evaluation of vaccination programmes and studies to increase uptake ✚ decision making, outcomes from vaccination and evaluation of evidence to inform policy
3.5 Resources and infrastructure (prevention)	<ul style="list-style-type: none"> ✚ development and/or distribution of resources for use by the research community including equipment, cell lines, tissue and DNA banks ✚ infrastructure to support research trials, networks, consortia and centres

Research Activity Codes

4 Detection, Screening and Diagnosis	Discovery, development and evaluation of diagnostic, prognostic and predictive markers and technologies
4.1 Discovery and preclinical testing of markers and technologies	<p>Discovery, development and preclinical testing of novel markers (that may be derived from patient samples) and technologies for use in detection, diagnosis, prediction, prognosis and monitoring including</p> <ul style="list-style-type: none"> ✚ biological and psychological markers ✚ diagnostic and monitoring devices, imaging, scanning, predictive and ✚ diagnostic tests ✚ development and characterisation of models ✚ diagnostic measures and methodologies
4.2 Evaluation of markers and technologies	<p>Testing and evaluation of markers and technologies in humans for use in detection, diagnosis, prediction, prognosis and monitoring in clinical, community or applied settings including</p> <ul style="list-style-type: none"> ✚ assessment of sensitivity, efficacy, specificity. predictive and prognostic value, reproducibility and safety ✚ medical devices, imaging, diagnostic and predictive tests ✚ evaluation of diagnostic models, methods and methodologies in clinical or applied settings
4.3 Influences and impact	<p>Studies investigating impact of screening and factors affecting uptake including</p> <ul style="list-style-type: none"> ✚ attitudes and beliefs including cultural and religious practices ✚ issues relating to gender, age and ethnicity ✚ genetic counselling and decision making ✚ psychological, social and economic factors ✚ development, implementation and evaluation of interventions to promote screening including policy, education and communication
4.4 Population screening	<p>Studies investigating population screening programmes including</p> <ul style="list-style-type: none"> ✚ feasibility studies, pilot studies and trials ✚ evaluation of effectiveness, benefits and economic evaluation ✚ impact on health services and policy issues ✚ models of population surveillance
4.5 Resources and infrastructure (detection)	<ul style="list-style-type: none"> ✚ development and/or distribution of resources for use by the research community including equipment, cell lines, tissue and DNA banks, and informatics systems ✚ infrastructure support for research trials, networks, consortia and centres

Research Activity Codes

5 Development of Treatments and Therapeutic Interventions	Discovery and development of therapeutic interventions and testing in model systems and preclinical settings
5.1 Pharmaceuticals	<p>Identification and development of pharmaceutical small molecules, therapeutic vaccines, antibodies and hormones including</p> <ul style="list-style-type: none"> ✚ drug screening and development of delivery systems ✚ mechanism of action including side effects and drug resistance ✚ pharmacogenetics, prediction of genetic variation and responses to drugs ✚ testing in in vitro and in vivo model systems
5.2 Cellular and gene therapies	<p>Discovery and development of cellular, tissue and gene therapies including</p> <ul style="list-style-type: none"> ✚ gene therapy, stem cells therapy, in vitro fertilisation and tissue engineering ✚ development of delivery systems ✚ development of culture systems ✚ testing in in vitro and in vivo model systems
5.3 Medical devices	<p>Discovery and development of medical devices including</p> <ul style="list-style-type: none"> ✚ implantable devices, mobility aids, dressings, medical equipment and prostheses ✚ biological safety assessments and investigation of adverse events ✚ sterilisation and decontamination of equipment or surfaces ✚ testing in in vitro and in vivo model systems
5.4 Surgery	<p>Development of surgical, obstetric and dental interventions including</p> <ul style="list-style-type: none"> ✚ histocompatibility, transfusions, transplantations including xenograft studies and bone marrow transplants ✚ mechanisms of recovery, tolerance, rejection and side effects including infection ✚ testing in in vitro and in vivo model systems
5.5 Radiotherapy	<p>Discovery and development of interventions including</p> <ul style="list-style-type: none"> ✚ radiobiology, radiotherapy, radioimmunotherapy, radiosensitisers, microwaves, ultrasound, laser and phototherapy ✚ development of delivery systems ✚ investigation of mechanisms of action and side effects ✚ testing in in vitro and in vivo model systems
5.6 Psychological and behavioural	<p>Development of psychological and behavioural interventions including</p> <ul style="list-style-type: none"> ✚ cognitive behavioural therapy, electro-convulsive therapy, counselling, therapy and social interventions ✚ testing in model systems
5.7 Physical	<p>Development of physical interventions including</p> <ul style="list-style-type: none"> ✚ physical therapies, physiotherapy, occupational therapy, speech therapy, dietetics, exercise and osteopathy ✚ mechanisms of action ✚ testing in model systems
5.8 Complementary	<p>Discovery and development of complementary approaches to conventional medical therapies including</p> <ul style="list-style-type: none"> ✚ hypnotherapy, meditation, massage, acupuncture and homeopathy ✚ mechanisms of action ✚ testing in model systems

5.9 Resources and infrastructure (development of treatments)	 development and/or distribution of resources for general use by the research community including equipment, cell lines, tissue and DNA banks  infrastructure support for networks, consortia and centres
---	--

Research Activity Codes

6 Evaluation of Treatments and Therapeutic Interventions	Testing and evaluation of therapeutic interventions in clinical community or applied settings
6.1 Pharmaceuticals	<p>Clinical application and evaluation of pharmaceutical small molecules, therapeutic vaccines, antibodies and hormones in humans including</p> <ul style="list-style-type: none"> ✚ small scale settings and pilot studies ✚ phase I, II, III and IV trials ✚ assessing sensitivity, efficacy, specificity, relapse, survival, therapeutic value, pharmacokinetics, reproducibility and safety ✚ studies monitoring response, outcome, drug resistance and side effects
6.2 Cellular and gene therapies	<p>Clinical application and evaluation of cellular, tissue and gene therapies in humans including</p> <ul style="list-style-type: none"> ✚ small scale and pilot studies ✚ phase I, II, III and IV trials ✚ gene therapy, stem cell therapy, in vitro fertilisation, tissue engineering ✚ evaluation of applied delivery systems
6.3 Medical devices	<p>Application and evaluation of medical devices in humans in a clinical, community or applied setting including</p> <ul style="list-style-type: none"> ✚ implantable devices, mobility aids, dressings, medical equipment and prostheses ✚ validation of design and post market surveillance
6.4 Surgery	<p>Clinical and applied application and evaluation of surgical, obstetric and dental interventions in humans including</p> <ul style="list-style-type: none"> ✚ small scale and pilot studies ✚ phase I, II, III and IV trials ✚ procedures including organ and bone marrow transplantation, tissue grafts and transfusions ✚ monitoring outcomes, side effects and rejection
6.5 Radiotherapy	<p>Clinical application and evaluation of interventions in humans including</p> <ul style="list-style-type: none"> ✚ small scale and pilot studies ✚ phase I, II, III and IV trials ✚ radiotherapy, radioimmunotherapy and radiosensitisers, microwaves, ultrasound, laser and phototherapy ✚ monitoring side effects
6.6 Psychological and behavioural	<p>Application and evaluation of psychological and behavioural interventions in humans in clinical, community and applied settings</p> <ul style="list-style-type: none"> ✚ phase I, II, III and IV trials ✚ cognitive behavioural therapy, electro-convulsive therapy, counselling, therapy and social interventions
6.7 Physical	<p>Testing and evaluation of physical interventions in humans in a clinical, community or applied setting including</p> <ul style="list-style-type: none"> ✚ physical therapies, physiotherapy, occupational therapy, speech therapy, dietetics, osteopathy and exercise
6.8 Complementary	<p>All aspects of testing, evaluation and provision of complementary approaches to conventional medicine</p>

	<p>in humans in a clinical, community or applied setting including</p> <ul style="list-style-type: none"> ✚ hypnotherapy, massage, acupuncture and homeopathy ✚ issues relating to health and social services and health care delivery ✚ attitudes and beliefs of patients and health care professionals
6.9 Resources and infrastructure (evaluation of treatments)	<ul style="list-style-type: none"> ✚ provision and distribution of resources related to clinical and applied therapeutic interventions ✚ infrastructure support for clinical and applied research networks and trials, consortia and centres

Research Activity Codes

7 Management of Diseases and Condition	Research into individual care needs and management of disease, conditions or ill health
7.1 Individual care needs	<p>Studies of patients and service user care needs including</p> <ul style="list-style-type: none"> ✚ quality of life, management of acute and chronic symptoms, management of side effects, rehabilitation, long term morbidity and reproductive issues ✚ psychological impact of illness ✚ social and economic consequences of ill health ✚ behaviour affecting disease management including secondary ✚ prevention, compliance to treatment and attitudes and beliefs relating to seeking treatment ✚ assessment of social care and health services needs ✚ educational or communication interventions to promote self-care or improve health care by carers ✚ impact on carers
7.2 End of life care	<p>Studies involving all issues related to palliative care and end of life care including</p> <ul style="list-style-type: none"> ✚ assessment of patient, service user and carer needs ✚ provision and evaluation of palliative and end of life care services ✚ quality of life for patients and carers ✚ evaluation of interventions for health and social care professionals ✚ social, economic and policy issues ✚ pain management for terminally ill people ✚ bereavement
7.3 Management and decision making	<p>conditions by health and social care professionals</p> <ul style="list-style-type: none"> ✚ attitudes, beliefs and behaviours of health and social care professionals ✚ investigation of decision making including factors influencing diagnosis, treatment, referral and management strategies ✚ educational interventions and communication practices ✚ development of guidelines, interventions or models to assist decision making and management, including identifying symptoms, predicting outcomes and identifying individuals at risk ✚ testing and evaluating management regimes and strategies
7.4 Resources and infrastructure (disease management)	<p>development and/or distribution of resources and equipment for use by the community including informatics systems</p> <ul style="list-style-type: none"> ✚ infrastructure support for trials, networks, consortia and centres

Research Activity Codes

8 Health and Social Care Services Research	Research into the provision and delivery of health and social care services, health policy and studies of research design, measurements and methodologies
8.1 Organisation and delivery of services	<p>Examining the organisation and provision of health and social care services and evaluating factors affecting the quality of care</p> <ul style="list-style-type: none"> ✚ workforce and career issues ✚ organisation and management of services ✚ access to health and social care and geographical variations in outcomes ✚ effectiveness of different care settings and models of service delivery ✚ evaluating quality of care including patient safety issues ✚ evaluation of experiences of service users ✚ assessment of current and future health care demands ✚ development and evaluation of interventions to improve services
8.2 Health and welfare economics	<p>Economic evaluation of health and social care interventions and delivery including</p> <ul style="list-style-type: none"> ✚ cost-benefit analysis of services including economic modelling ✚ cost effectiveness or economic feasibility of implementing new interventions or technologies within health services ✚ economic assessment of service productivity and outcomes ✚ health care costs ✚ development and evaluation of economic models of health care
8.3 Policy, ethics and research governance	<ul style="list-style-type: none"> ✚ evaluation of local, regional and national healthcare policy ✚ impact of legislation ✚ synthesis and evaluation of evidence to inform policy ✚ dissemination and implementation of research evidence ✚ research ethics including use of personal data and biological material, consent and confidentiality ✚ research governance and regulation processes including interpretation of guidelines ✚ issues surrounding research subjects and donor recruitment
8.4 Research design and methodologies	<p>Development of research designs and novel methodologies for health care including treatment, management and health services research</p> <ul style="list-style-type: none"> ✚ analytical innovation, methodological research, statistical methods and modelling ✚ development of research measurements including outcome measures ✚ development of methods of research assessment and evaluation ✚ development and evaluation of research designs and methodologies
8.5 Resources and infrastructure (health services)	<ul style="list-style-type: none"> ✚ development and distribution of resources for use by the community including informatics systems ✚ infrastructure support for networks, trials, consortia and centres

Appendix 2:

Areas of Research

S/N	Areas of Research	General Description
1	Artificial intelligence (AI)	<p>Generally refers to intelligence demonstrated by machines. In healthcare, AI applications are commonly algorithmic (i.e., evidence based approaches programmed by researchers or clinicians). The computer algorithms are created to be able to approximate human cognition in the analysis of complex medical data without direct human inputs. The primary aim of health-related AI applications is to analyse relationships between prevention or treatment techniques and patient outcomes.</p> <p>E.g., AI uses include robot-assisted surgery, monitoring of images or patient data to aid in disease detection etc</p>
2	Digital health	<p>Use of infocomm technologies to help address the health problems and challenges faced by patients, and include hardware and software solutions and services.</p> <p>Generally, it refers to the development of interconnected health systems which could improve the use of computational technologies, smart devices, computational analysis techniques and communication media, so as to aid healthcare professionals and patients manage illness and health risks as well as promote health and wellbeing.</p>
3	Data science and data analytics	<p>Data science involve dealing with structured or unstructured data, similar to data mining. It is multidisciplinary, involving statistics, mathematics, programming etc, to extract insights and information from data. Data analytics involves the application of algorithmic or mechanical process to examine raw data, with the purpose of drawing conclusions about the information.</p> <p>E.g., Could be used to optimize hospital operations in its planning, management, measurement etc.</p>
4	Epidemiology, Population Health and Implementation Science	<p>Study and analysis of the distribution and determinants of health and disease conditions in a defined population, strategies and methods to promote uptake of interventions into routine practice, with the aim of improving the health of the population.</p>
5	Family Medicine and Primary Care	<p>Studies of comprehensive healthcare provided in the community for people of all ages where they make initial approach to a medical practitioner or clinic for advice or treatment.</p> <p>E.g. Research on better management of patients with chronic and/or multiple diseases and support for their caregivers etc.</p>
6	Healthy and Productive Longevity	<p>Research that make an impact on the ageing population, which can include the following areas:</p> <p>Lengthening of health span – ways to delay the onset of disease and disability and expand seniors' "health span".</p> <p>Productive longevity – ways to expand the worklife so as to yield productivity in longevity.</p> <p>Ageing in place – research which helps seniors live independent lives despite physical frailty.</p>
7	Precision Medicine	<p>Generally refers to the customisation of medical treatments and clinical care to specific patient groups, based on their underlying clinical, socio-demographic or genetic profiles.</p>
8	Medical Technology (MedTech) innovations	<p>Novel technologies that diagnose, treat and/or improve human health. They can address intractable healthcare challenges and improve healthcare delivery, contributing to healthcare outcomes and better overall health of the people, and come in many forms, from medical devices and equipment to diagnostic kits and software.</p>
